

The Wood County Museum Presents

“The History of Wood County:

10,000 B.C. to the Present

(in thirty minutes)”

This program is a 30-40 minute Power Point presentation about the history of Wood County, and northwest Ohio, from the last Ice Age to the present. The broad nature of this presentation lends itself to effectively cover many portions of the State of Ohio Elementary Social Studies Standards. Land formations, Native Americans, Settlements, Industry, Transportation, and Agriculture are all part of this unique lesson. This program can be brought to your classroom on the day and hour you request. The museum will provide the projector. All that is required is an area to show the images and a power outlet.

Accompanying the lesson are historic artifacts from the museum. These artifacts will be used to illustrate the changes that have occurred in Wood County. Prehistoric stone tools, drainage tile, and a corn planter together with a sample of Ohio crude oil, reproduction Native clothing, and a beaver pelt all help tell northwest Ohio's unique history. Some of these items will be passed out to students after the presentation for a "hands-on" historic experience. Questions will be answered after the presentation as time allows.

FEE: .50 cents per student and a \$15 donation to the museum.

If you would like this program presented in your classroom please contact Education Programs Coordinator, **Michael McMaster**, at 419-352-0967 or at
